While studying at a University, it does not matter what specialty you will be sent to practice sooner or later. This is necessary first of all to consolidate the received theoretical knowledge. During the course of study, each student goes through two or three practices, depending on the curriculum of the University. The first practice is an introductory (educational), the second is an industrial practice and the third is a pre-graduate practice. The results of each practice should be reflected in a report that includes a diary (in the diary, the practice Manager puts down visits and tasks for each day) and a characteristic from the practice Manager. To write a report, you need to know the specifics of each type of practice.

Training practice is like a tour of an enterprise or organization in which you are shown from the inside and told how the enterprise as a whole works and then shown how people work in your educational specialty. All this is carried out by the head of the training practice, usually a person working at the company and close to you in the specialty. For some students, this practice allows you to understand whether they have correctly chosen a specialty, if not, you can always transfer, because the training practice is conducted on the 1-2 course.

Production practice is conducted on the 3rd-4th year of training. Here, students are given the opportunity to work in their specialty using all the knowledge they have received, although under the supervision of a curator. Industrial practice is much more interesting than introductory, and sometimes the company also pays for the work of students.

Pre-graduate practice is the last practice that allows you to collect materials on the work of the company that will be used when writing a thesis. A report on this practice can be included in the thesis, which is exactly what many students do.

The practice report has a standard structure and includes:

- 1) Title page;
- 2) task on practice;
- 3) Calendar plan;
- 4) Diary;
- 5) a Characteristic from the head of the practice;
- 6) the Contents;
- 7) Introduction;
- 8) the Main part;
- 9) Conclusion;
- 10) references;
- 11) Applications.

A sample of the title page design is usually provided in the manual. Usually the title page displays information about the University, the type of practice, the student, the head of the practice, the year and place of passage.
